This collection of information is required by 37 CFR 1.133. The information is required to obtain or retain a benefit by the public which is in the public interest (and by the USPTO in process) an application. Confidentiality is provided by 35 U.S.C. 122 and 37 CFR 1.13 and 1.14. This collection is estimated to take 24 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

In applicant's response to the Office Action dated 01/09/2007, applicant argued that

"neither Figure 2 or Figure 4 discloses any aspect of storing data."

See page 6, paragraph A.

In the Office Action dated 06/14/2007, the Examiner says "applicant's arguments . . . are moot in view of the new ground(s) of rejection." See page 2, paragraph 1. The June 6 Office Action restates the language first presented in the Office Action dated 01/09/2007:

"-transforming image data as it is received by selectively storing some of the image data in a memory for access by the display device 24 as shown in Fig. 2 and discarding other of the image data (see Fig. 4: discarding every other pixel 30 in a row).

The new grounds of rejection relate to U.S. Pat. No. 7,202,917 to Katoh, et al. In particular, according to the Office Action, "Katoh teaches the image data is in a predetermined order of pixel components."

Applicant does not understand how his argument is mooted by Katoh. For convenience, the elements of claim 1 are reproduced below.

Claim 1 recites the steps of:

- (a) receiving image data representing a plurality of pixels defining an image for display on the display device, the image data being transmitted in a data stream and being in a predetermined order of pixel components; and
- (b) transforming the image data as it is received by selectively storing some of the pixel components in a memory for access by the display device and discarding other of the pixel components (emphasis added).
